

HIGH YIELD FUND

I2 HEUR ISIN IE0009531603

Investment objective

The Fund aims to provide a high income with the potential for some capital growth over the long term. Performance target: To outperform the Bloomberg U.S. Corporate High Yield Bond Index by 1.25% per annum, before the deduction of charges, over any 5 year period.

For the fund's investment policy, refer to the Additional fund information on page 3.

Past performance does not predict future returns.

Not Rated	-11.03	—

Bond credit quality ratings provided by Barclays and reflect the middle rating received from Moody's, Standard & Poor's and Fitch, where all three agencies have provided a rating. If only two agencies rate a security, the lowest rating is used. If only one agency rates a security, that rating is used. Ratings are measured on a scale that ranges from Aaa (highest) to D (lowest).

Fees & charges (%)

Annual management charge (AMC)	0.65
Ongoing charge (OCF)	0.74

All ongoing charges stated are as per latest published report and accounts. Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com. Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. As of 1 October 2022 Tom Ross also manages this fund. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. This is an Irish Investment Company regulated by the Central Bank of Ireland. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. A short-term trading fee may be applied upon exiting the fund as per the prospectus. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund.

Investment policy

The Fund invests at least 80% of its assets in US high yield (non-investment grade, equivalent to BB+ rated or lower) corporate bonds, issued by companies or any other type of issuer. The Fund may also hold other assets including bonds of other types from any issuer, cash and money market instruments. The investment manager may use derivatives (complex financial instruments) to reduce risk, to manage the Fund more efficiently, or to generate additional capital or income for the Fund. The Fund is actively managed with reference to the Bloomberg U.S. Corporate High Yield Bond Index, which is broadly representative of the bonds in which it may invest, as this forms the basis of the Fund's performance target. The investment manager has discretion to choose investments for the Fund with weightings different to the index or not in the index, but at times the Fund may hold investments similar to the index.

Investment strategy

The investment manager draws on Janus Henderson's integrated fixed income and equity research function, to identify the best risk-adjusted opportunities for the Fund. The strategy has the flexibility to deviate significantly from the index on a sector basis while having a strong focus towards the US. The investment process is dynamic with allocations to different types of bonds determined by the opportunities which exist and is supported by a proprietary research and risk management system.

Fund specific risks

The Fund may invest in contingent convertible bonds (CoCos), which can fall sharply in value if the financial strength of an issuer weakens and a predetermined trigger event causes the bonds to be converted into shares of the issuer or to be partly or wholly written off. The Fund could lose money if a counterparty with which the Fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider. When the Fund, or a hedged share/unit class, seeks to mitigate exchange rate movements of a currency relative to the base currency, the hedging strategy itself may create a positive or negative impact to the value of the Fund due to differences in short-term interest rates between the currencies. In addition to income, this share class may distribute realised and unrealised capital gains and original capital invested. Fees, charges and expenses are also deducted from capital. Both factors may result in capital erosion and reduced potential for capital growth. Investors should also note that distributions of this nature may be treated (and taxable) as income depending on local tax legislation. An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital to the Fund. If this happens or the market perceives this may happen, the value of the bond will fall. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise. This risk is generally greater the longer the maturity of a bond investment. The Fund invests in high yield (non-investment grade) bonds and while these generally offer higher rates of interest than investment grade bonds, they are more speculative and more sensitive to adverse changes in market conditions. If a Fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a Fund which is more broadly diversified. The Fund may use derivatives towards the aim of achieving its investment objective. This can result in 'leverage', which can magnify an investment outcome and gains or losses to the Fund may be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Some or all of the ongoing charges may be taken from capital, which may erode capital or reduce potential for capital growth. The Fund may incur a higher level of transaction costs as a result of investing in less actively traded or less developed markets compared to a fund that invests in more active/developed markets. These transaction costs are in addition to the Fund's Ongoing Charges.

Glossary

Discount

When the market price of a security is thought to be less than its underlying value, it is said to be 'trading at a discount'. Within investment trusts, this is the amount by which the price per share of an investment trust is lower than the value of its underlying net asset value. The opposite of trading at a premium.

Duration

How far a fixed income security or portfolio is sensitive to a change in interest rates, measured in terms of the weighted average of all the security/portfolio's remaining cash flows (both coupons and principal). It is expressed as a number of years. The larger the figure, the more sensitive it is to a movement in interest rates. 'Going short duration' refers to reducing the average duration of a portfolio. Alternatively, 'going long duration' refers to extending a portfolio's average duration.

Future

A contract between two parties to buy or sell a tradable asset, such as shares, bonds, commodities or currencies, at a specified future date at a price agreed today. A future is a form of derivative.

High yield bond

A bond which has a lower credit rating below an investment grade bond. It is sometimes known as a sub-investment grade bond. These bonds usually carry a higher risk of the issuer defaulting on their payments, so they are typically issued with a higher coupon to compensate for the additional risk.

Option

A derivative instrument where one party pays/receives the total return of the underlying asset or market index, in exchange for payments typically linked to LIBOR.

Secured loan

A loan where the borrower has promised to give the lender certain assets if they fail to make repayments.

Tracking error

This measures how far a portfolio's actual performance differs from its benchmark index. The lower the number, the more closely it resembles the index.

WAM (Weighted Average Maturity)

The average time remaining until the maturity of assets in a portfolio.

Yield to worst

If a bond has special features, such as a call (ie, the issuer can call the bond back at a date specified in advance), the yield to worst is the lowest yield the bond can achieve provided the issuer does not default.
