What are the risks specific to this fund?

- This fund is designed to be used only as one component in several in a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested into this fund.
- Investment management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.
- The Fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Fund.
- When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise. This risk is generally greater the longer the maturity of a bond investment.
- The value of a bond or money market instrument may fall if the financial health of the issuer weakens, or the market believes it may weaken. This risk is greater the lower the credit quality of the bond.
- Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.
- Derivatives use exposes the Fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.
- If the Fund or a specific share class of the Fund seeks to reduce risks (such as exchange rate movements), the measures designed to do so may be ineffective, unavailable or detrimental.

General risks

- Past performance is not a guide to future performance.
- The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.
- Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change.

Important information

Fund size at 12pm on last business day of month. Yields are shown net except for bond funds which are shown gross. All credit, country and sector breakdowns relate to end of day trading positions. Charges payable out of the property of the Schemes will in the first instance be payable out of the income property of the Scheme. In the unlikely event that the income property is not sufficient to meet charges and expenses due by the Scheme the charges and expenses due will be payable out of the capital property of the Scheme which may have the effect of constraining capital growth. * Yields are shown net except for bond funds which are shown gross. The Distribution Yield reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the mid-market share price of the fund at the date shown. The Underlying Yield reflects the annualised income net of expenses of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the fund at the date shown. The Distribution and Underlying Yields are based on a snapshot of the portfolio on that day. The yields do not include any preliminary charge and investors may be subject to tax on distributions. The Distribution Yield may be higher than the Underlying Yield. This is because the fund may distribute coupon income. This has the effect of increasing the distributions for the year and constraining the fund's capital performance to an equivalent extent. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%.
