

# MULTI-MANAGER DIVERSIFIED FUND

**E Acc ISIN GB00BJ0LG635**

## Investment objective

The Fund aims to provide a return, from a combination of capital growth and income over the long term. Performance target: To outperform the IA Mixed Investment 0-35% Shares sector average, after the deduction of charges, over any 5 year period.

For the fund's investment policy, refer to the Additional fund information on page 3.

**Past performance does not predict future returns.**

## Performance (%)

Fees & charges (%)

Annual management charge (AMC)	0.75
Ongoing charge (OCF)	1.10

All ongoing charges stated are as per latest published report and accounts.  
Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at [www.janushenderson.com](http://www.janushenderson.com).  
Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

## Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. From 07 July 2023, Paul O'Connor no longer manages this fund, James de Bunsen and Peter Webster now co-manage this fund. From 11 March 2022, the Fund changed its Investment Policy. The past performance shown before this change was therefore achieved under circumstances that no longer apply. The fund will include investments in various different share classes of split capital investment trust companies and other highly geared shares. Such companies employ borrowing to 'gear up' the assets with the aim of enhancing returns. Where this occurs, shares in such companies will rank after such borrowings, and should those companies' assets fall in value, their ability to pay their shareholders may be affected. You should note that as a result of investing in companies that employ gearing, the price of the fund may be more volatile and could be subject to sudden and large falls in value. If there is a sufficiently large fall in value, you may not get back any of your investment. As the fund invests in such share classes, it may be regarded as higher risk. Fund size at 12pm on last business day of month. 100% of the Annual Management Charge is taken from capital. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

The Investment Association (IA) groups funds with similar geographic and/or investment remit into sectors. The Fund's ranking within the sector (as calculated by a number of data providers) forms the basis of the Fund's performance target and can be a useful performance comparison against other funds with similar aims. The sector also limits the Fund's exposure to shares of companies (also sometimes referred to as equities) to a maximum of 35%.

### Investment policy

The Fund invests in Collective Investment Schemes (other funds including those managed by Janus Henderson and Exchange Traded Funds) to provide diversified global exposure to a range of assets including shares (equities) of companies, bonds issued by companies and governments, and to a lesser extent, alternative assets such as property, commodities, private equity and hedge funds. The Fund may also invest directly in other assets including developed market government bonds, investment trusts, cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) with the aim of making investment gains in line with the Fund's objective, to reduce risk or to manage the Fund more efficiently. The Fund is actively managed with reference to the IA Mixed Investment 0-35% Shares sector average, which is based on a peer group of broadly similar funds, as this forms the basis of the Fund's performance target and limits the level of exposure the Fund may have to company shares. The Investment Manager has a high degree of freedom to choose individual investments for the Fund and to vary allocations between asset types within the constraints of the sector.

### Investment strategy

The Investment Manager believes that asset allocation opportunities are generated by inefficient markets over short term periods and the Fund's asset mix is actively adjusted to reflect this and to reduce overall risk. The Fund will allocate across regional equities, the entire bond universe, alternative asset classes such as property and commodities and cash in weights cognisant of the benchmark index. Asset allocation views can be formed on the grounds of fundamental research, asset class valuations, market sentiment, investor positioning, news flow, technical factors and diversification. Investments are implemented primarily through actively managed funds, while passive (index tracking) instruments (primarily ETFs or derivatives) are used for short term tactical trades or for low cost implementation of pure macroeconomic views.

### Fund specific risks

The Fund could lose money if a counterparty with which the Fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider. An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital to the Fund. If this happens or the market perceives this may happen, the value of the bond will fall. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise (or are expected to rise). This risk is typically greater the longer the maturity of a bond investment. The Fund invests in other funds (including exchange-traded funds and investment trusts/companies). This may introduce more risky assets, derivative usage and other risks associated with the underlying funds, as well as contributing to a higher level of ongoing charges. The Fund may use derivatives to help achieve its investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses to the Fund may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. If the Fund holds assets in currencies other than the base currency of the Fund, or you invest in a share/unit class of a different currency to the Fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates. Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Some or all of the ongoing charges may be taken from capital, which may erode capital or reduce potential for capital growth.

### Source for fund ratings/awards

Overall Morningstar Rating™ is shown for Janus Henderson share classes achieving a rating of 4 or 5.

## Glossary

### Historic Yield

The Historic Yield reflects distributions declared over the past 12 months as a percentage of the mid-market share price, as at the date shown.

### Standard deviation

A statistic that measures the variation or dispersion of a set of values/data. A low standard deviation shows the values tend to be close to the mean while a high standard deviation indicates the values are more spread out. In terms of valuing investments, standard deviation can provide a gauge of the historical volatility of an investment.
